Claims

A condensing apparatus of a dish washer for condensing vapor inside a dish [1] washer tub, the condensing apparatus comprising: an air duct for circulating and condensing vapor from inside the tub; and a blower including a condenser fan for blowing air at the air duct to exchange heat with the vapor circulating inside the air duct, and a dryer fan for providing suctioning force to suction vapor from inside the tub. The condensing apparatus according to claim 1, wherein the condenser fan blows [2] air along an outside of the air duct. The condensing apparatus according to claim 1, wherein the blower further [3] includes a motor for driving the condenser fan and the dryer fan together. The condensing apparatus according to claim 3, wherein the motor has a rotating [4] shaft to which both the condenser fan and the dryer fan are mounted. The condensing apparatus according to claim 1, wherein the condenser fan is [5] disposed at a front of the blower. The condensing apparatus according to claim 1, wherein the dryer and or the [6] condenser fan is a cross-flow fan. The condensing apparatus according to claim 1, wherein the blower is disposed [7] at a top of the air duct. The condensing apparatus according to claim 1, wherein the air duct includes a [8] condensed water discharge port for discharging moisture condensed from the vapor and a split-type vapor exhaust port for exhausting vapor from which moisture has been removed. The condensing apparatus according to claim 8, wherein the air duct further [9] includes a portion between the condensed water discharge port and the vapor exhaust port, the portion being inclined at a predetermined angle to dispose the condensed water discharge port lower than the vapor exhaust port. A condensing apparatus of a dish washer for condensing vapor inside a dish [10] washer tub, the condensing apparatus comprising: an air duct for circulating and condensing vapor from inside the tub; a dryer fan for generating suctioning force to suction vapor from inside the tub into the air duct; a motor for driving the dryer fan; and a condenser fan for blowing air at the air duct to exchange heat with the vapor

WO 2006/080706

PCT/KR2005/003317

circulating inside the air duct, the condenser fan driven by the motor. The condensing apparatus according to claim 10, wherein the motor drives the [11] dryer fan and the condenser fan together. The condensing apparatus according to claim 11, wherein the motor has a [12] rotating shaft to which both the dryer fan and the condenser fan are coupled. The condensing apparatus according to claim 10, further comprising a blower to [13] which the dryer fan, the motor, and the condenser fan are installed. The condensing apparatus according to claim 13, wherein the condenser fan is [14] disposed at a front of the blower. The condensing apparatus according to claim 10, wherein the condenser fan [15] blows air along an outside of the air duct. The condensing apparatus according to claim 10, wherein the dryer fan and/or [16] the condenser fan is a cross-flow fan. A condensing apparatus of a dish washer comprising: [17] an air duct for circulating and condensing vapor from inside a dish washer tub; and a condenser fan for blowing air at the air duct to exchange heat with the vapor circulating inside the air duct. The condensing apparatus according to claim 17, wherein the condenser fan [18] blows air along an outside of the air duct. The condensing apparatus according to claim 17, wherein the condenser fan is [19] disposed at a top of the air duct. The condensing apparatus according to claim 17, further comprising a dryer fan [20] providing suctioning force for suctioning the vapor into the air duct and a motor for driving the dryer fan, wherein the condenser fan is driven together with the dryer fan by the motor.
